

GGT Footing Press Release
June 17, 2010

A Massachusetts Success Story

The new barn and indoor arena at Rising Star Stables in Carver, Mass (<http://www.risingstar-stables.com>) were completed in early 2010 and were ready for footing late in April. Although the farm owners, Stella O'Donnell and Laura Moore, had tentatively chosen a different footing product, once they got a sample of GGT footing® from Massachusetts distributor Read Custom Soils, they quickly changed her mind. One week later they were taking delivery of 4,000 lbs of GGT Footing® that was blended through a pugmill with 100 tons of Read's fine equestrian sand. The footing has impressed everyone who has had a chance to ride at Rising Star -"everyone loves it!" raves Laura. Rising Star Stables has now joined Read Custom Soils list of satisfied customers.

GGT says that "the secret is in the sand". Read Custom Soils agrees and believes that the sand is also part of the secret! Read Custom Soils manufactures equestrian sand that is perfectly suited for mixing with GGT Footing additives: finely graded, sub-angular particle shape and extremely low silt and clay content. This sand is stable, durable, fast draining and the low silt/clay content means less potential dust. Add to this Read's sophisticated blending capabilities, strict quality controls and delivery logistics and you have a full service footing supplier! Their footing specialist, Tony Will, is available to answer questions, offer advice and provide competitive pricing.
